***Ficus microcarpa* var. *hillii* (F.M.Bailey) Corner**

- Corner, E.J.H. (1960), Taxonomic Notes on *Ficus* Linn., Asia and Australasia I. Subgen. *Urostigma* (Gasp.) Miq. *The Gardens' Bulletin, Singapore* 17 : 398

W.-L.Chew

Leaves narrowly elliptic to narrowly obovate, often bluntly acuminate to somewhat acute, cuneate at base; lamina to 11 cm long and 6 cm wide; venation not prominent beneath; basal veins not prominent beneath; petiole somewhat articulated. Figs usually without internal bristles.

Distribution: Occurs in north-eastern Qld S to Yeppoon; also from the Sunda Islands, Indonesia, through New Guinea to New Caledonia and the Loyalty Islands.

Habitat: Grows in strand forest.

Representative Herbarium Specimens: Qld: Clump Point, L.S.Smith 4817 (BRI); between Clump Point and Bingil Bay, L.S.Smith 4861 (BRI).

Notes: Commonly cultivated in Australia as roadside tree, especially in warmer regions near the coast. Since publication of the *Flora of Australia* treatment the *Australian Plant Census* still lists this variety as recognised but in an explanatory note explains it is probably a synonym of *Ficus microcarpa*.

Source: Data derived from *Flora of Australia* volume 3 (1989), a product of ABRS, ©Commonwealth of Australia

Conservation Status

QLD - Least Concern

Nomenclature

Chew, W.-L. in George, A.S. (ed.) (1989), Moraceae. *Flora of Australia* 3 : 39, Map 32
nomenclatural synonym: *Ficus hillii* F.M.Bailey: 39
